

USE CASES

1. Actor: Landlord / Portfolio Manager

Goal: High-level oversight, financial health monitoring, and property configuration.

UC-01: Global Portfolio Review

- **Actor:** Landlord
- **Description:** The Landlord logs in to view an aggregated dashboard showing total revenue, vacancy rates, and total arrears across all 5 properties.
- **Preconditions:** Multiple properties must be onboarded.
- **Postconditions:** Landlord identifies which property is underperforming (e.g., high vacancy in "Property B").

UC-02: Property-Specific Context Switch

- **Actor:** Landlord / Property Manager
- **Description:** The user selects "Sunrise Apartments" from a dropdown. The entire UI (stats, tenant lists, and expenses) filters to show only data related to that specific property. •
- **Postconditions:** System state is updated to the selected PropertyID.

UC-03: Expense Logging & P&L Generation

- **Actor:** Landlord / Accountant
- **Description:** Landlord uploads a digital receipt for a plumbing repair in Unit 4B. They categorize it as "Maintenance." At the end of the month, they generate a P&L report. •
- **Postconditions:** Net Operating Income (NOI) is automatically recalculated for that property.

2. Actor: Property Manager

Goal: Daily operational tasks and tenant lifecycle management.

UC-04: Tenant Onboarding & Lease Activation

- **Actor:** Property Manager
- **Description:** Manager captures Tenant details, National ID, and Next of Kin info. They assign the tenant to "Unit 12" and set the lease start date.
- **Postconditions:** A security deposit "Debit" is created, and the Unit status changes from VACANT to OCCUPIED.

UC-05: Manual Batch Reconciliation

- **Actor:** Property Manager

- **Description:** Manager receives a bank statement CSV. They upload it to the app. The app "suggests" matches for 90% of the entries based on House Numbers found in the payment descriptions. The manager clicks "Approve All."
- **Postconditions:** Multiple tenant balances are updated simultaneously.

UC-06: Lease Termination & Deposit Refund

- **Actor:** Property Manager
- **Description:** Tenant gives notice. Manager conducts an inspection and enters a "Deduction" of \$50 for a broken window. The system calculates the remaining refund.
- **Postconditions:** Lease status moves to EXPIRED, and a "Refund" transaction is recorded.

3. Actor: Tenant

Goal: Self-service and financial transparency.

UC-07: Real-Time Balance Check

- **Actor:** Tenant
- **Description:** Tenant logs into the portal/app to see their current statement. They see a rent debit for the current month and their last three M-Pesa payments.
- **Postconditions:** Tenant confirms their account is up to date without calling the manager.

4. Actor: System (Automated)

Goal: Background processes and data integrity.

UC-08: Automated Monthly Billing (Cron Job)

- **Actor:** System
- **Description:** On the 1st of the month, the system identifies all ACTIVE leases and generates a "Rent Due" debit.
- **Postconditions:** Tenant balances increase by the RentAmount, and "Rent Due" SMS notifications are queued.

UC-09: API Payment Reconciliation

- **Actor:** System / Payment Gateway
- **Description:** A payment is made via the API. The system validates the AccountReference, finds the matching Tenant, applies the credit, and sends a "Payment Received" SMS.
- **Postconditions:** The ledger is updated in real-time with zero human intervention.

Use Case Summary Table for Developers

ID	Title	Priority	Complexity	Primary Benefit
UC-02	Context Switch	High	Medium	Ensures data

ID	Title	Priority	Complexity	PrimaryBenefit
				isolation between properties.
UC-05	Batch Upload	Medium	High	Saves hours of manual data entry.
UC-08	Auto-Billing	High	Low	Ensures no month goes unbilled.
UC-09	API Reconcilia		High	Core value proposition: Automated cash flow.
