

1. Automated Notification Engine

The goal is to reduce manual touchpoints by triggering messages based on specific lifecycle “events”.

- **Tenant Onboarding:** Auto-send welcome kits, digital keys, and wifi-credentials.
- **Rent lifecycle:**
 - **T-5 Days:** Friendly “Rent Due Soon” reminder.
 - **Due Date:** Official invoice delivery.
 - **Payment Confirmation:** Instant “thank you” receipt once the system reconciles the payment.
- **Offboarding:** Notifications triggered 30 days before lease expiry regarding move-out inspections and deposit returns.

2. Payment and Batch Processing.

Managing scale requires moving beyond one by one entries. Your system should handle diverse payment inputs efficiently.

Manual vs Batch

- **Manual Entry:** For one-off cash or check (cheque) payments, providing instant digital receipt.
- **Csv Batch Processing:**
 - **The workflow:** Upload bank statement exports or mobile logs.
 - **Validation:** The system should cross-reference the **Tenant ID** or **Reference Number** in the csv against your Database.
 - **Error Handling:** Flags “Unmatched Records” (eg., a tenant paid but used the wrong reference number) for manual review.

3. Whatsapp Business Integration

Since whatsapp has higher open rates than email, it serves as your primary communication “hub”.

- **Automated Notifications:** Connect your notification engine to the Whatsapp Business API to send the automated alerts mentioned in section 1.
- **Broadcast Notices:** Send bulk messages for building-wide updates (eg., “water maintenance scheduled for Thursday”) without creating messy group chats.
- **Two-way Communication:** Allow tenants to report maintenance issues via whatsapp business, which can then be auto-converted into “maintenance Tickets” in your dashboard.

4. Intelligent Data Entry (OCR)

Optical Character Recognition (OCR) eliminates the friction of manual data entry during the leasing process.

- **Lease Parsing:** Scan signed physical leases: the OCR extracts the **Monthly Rent**, **Lease End Date** and **Security Deposit** amounts directly into the system.
- **Tenant Onboarding:** Use OCR to read Government IDs or Passports.
 - **Benefits:** Instantly populates the “New Tenant” form with Name, ID Number, and Date of birth, ensuring 100% accuracy and speed up the move-in process.

The statement headers: Date,Transaction,Currency,Deposit;

Sample record:

29/04/2026,"MPESA TO ACC 0100316372900 UDTQS2OHFR TIMESTAMP:
254724735509 TO 0100316372900","KES","26,000.00";

Date	Transaction	Currency	Deposit/ Amount paid
29/04/2026	MPESA TO ACC 0100316372900 UDTQS2OHFR TIMESTAMP: 254724735509 TO 0100316372900	KES	26000
30/04/2026	MPESA TO ACC 0100316372900 UDTQS2OHG1 TIMESTAMP: 254711223344 TO 0100316372900	KES	15500
01/05/2026	MPESA TO ACC 0100316372900 UDTQS2OHG5 TIMESTAMP: 254799887766 TO 0100316372900	KES	32000
02/05/2026	MPESA TO ACC 0100316372900 UDTQS2OHH8 TIMESTAMP: 254700112233 TO 0100316372900	KES	20000
03/05/2026	MPESA TO ACC 0100316372900 UDTQS2OHJ2 TIMESTAMP: 254755443322 TO 0100316372900	KES	12750

-Bulk uploads will be done in the format above csv

-We need to add this to the payment creation module

-Payment history shows only today's transaction, we need it showing all transactions then someone can filter through

-We need to contact via WhatsApp rather than email due to the open rate. (WhatsApp service functions by itself like we do on the email service, in case we need to communicate anything to clients. It should be a reusable function)
